WATCH-COMMANDER
SECURITY GUARD TRACKING, CONTROL, AND REPORTING SYSTEM

If you're responsible for providing security for Shopping Centers, Apartment Communities, Construction Sites, Office Parks, or any one of a dozen other location types, we'd like to ask you a few questions:

1) Does your Security Provider give you the details of their patrol routes?

2) Do they provide details about officer performance standards?

3) Do they give you reports detailing how well their officers are doing in meeting these standards?

4) Are the reports they give you current, or is the data over a week old?

5) Are you getting usable reports, or are they giving you raw data that you need to spend time analyzing?

6) Is your Security Provider using supervisory tools that allow them to correct deficiencies before they become serious security issues.

7) Do they give you online real-time access to the patrol data and reports?

If your answer to any of these questions is 'NO', we'll ask you one more question: **How do you know that your security program is working?**

The primary reason that a security officer is on site, is to Observe, Report, and Provide a uniformed presence that deters crime. Let's face it, criminals don't want to commit a crime where they'll be observed by a security officer, but if security officers get lazy and don't make patrols when they should, they cannot observe or report, and they most certainly will not deter crime.

There is a solution: Watch Commander

With Watch Commander:

- An Android Smart-Phone replaces a dedicated tracking device.
- The phone scans a barcode at each designated checkpoint location.
- It matches the current GPS coordinates against the coordinates for the scanned checkpoint.
- In real-time the location scan is transmitted to the web for immediate viewing.
- An internal phone timer reminds the officer before they're late for the next checkpoint location scan.
- The App is self-documenting and can remind officers where the checkpoints are located, keeping re-training to a minimum.
- Our proprietary Client Connect feature gives you a simple color coded screen that summarizes the status of each active site.
- If an officer goes beyond a designated gap time, an automatic email lets you know corrective action is needed.
- The mobile app lets officers send messages and photos so you stay up-to-date on every site.

Watch Commander is a web-based Security Officer Tracking system, NOT a Security Guard & Patrol Service, so there's no need to change security providers. Ask you Security Service about Watch Commander. They may even Thank You because Watch Commander saves money!
